EDUCATION

Degree: Pursuing Bachelor of Science, Computer Science

College of Science and Engineering, University of Minnesota-Twin Cities.

[Expected Spring 2028]

Objective: Computer Science student focused on AI, data systems, and full-stack engineering, seeking internships where I can build reliable AI-driven products, data workflows, and backend systems for real-world applications.

SKILLS

- *Programming:* Python, Rust, TypeScript, JavaScript + React, Java, C
- *AI & Data:* Generative AI, LLM APIs, RAG, embeddings, pgvector, dataset curation, data pipelines.
- *Full Stack/Web:* Next.js, React, Tailwind CSS, REST APIs, server actions, backend logic, responsive UI.
- *Infrastructure:* Postgres, Supabase, Neon, Drizzle ORM, Strapi, Docker, Linux, Git, Vercel.
- *Other:* Public speaking, technical communication, team leadership

WORK EXPERIENCE

- **Web Development Intern** at NSEdu (Narayan Solutions, Bangalore) [June - August 2025]
 - Developed and deployed Assisto using Next.js, React.js, JavaScript, and Tailwind CSS.
 - Integrated APIs via Strapi backend for dynamic content management and data driven components.
 - Engineered high-performance, accessible UI components and dashboards, including SEO-optimized carousels and feature sections.
- **Research Assistant** – [BOOM \(Burst & Outburst Observations Monitor\)](#) University of Minnesota
 - Collaborating with Professor Michael Coughlin on developing a Rust-based logging middleware to capture and structure event streams for astronomical alert brokering [May 2025 - Ongoing]
 - Built tools for real-time event tracking and observability within Linux-based data processing pipelines.
 - Designed APIs to support structured data ingestion and analytics workflows for large observational datasets. Implemented backend logic enabling data integration and analytics-ready workflows.
- **CSE Student Ambassador** - Lead campus tours for prospective students and families, strengthening public speaking, communication, and audience-facing presentation skills. [September 2025]

PROJECTS & ACHIEVEMENTS

- **Arc - Learning Tracker + AI Tutor:** Building a Next.js + TypeScript platform with Clerk, Neon Postgres, Drizzle, and pgvector to support structured learning, concept review, and retrieval-based tutoring.
- **OpsPilot - AI Operations Dashboard:** Automate reservation, invoicing, payment, and feedback workflows. Separated deterministic backend logic from AI-generated summaries.
- **Jarvis - Second Brain:** Obsidian note taking system improved using computer vision, visualizing ideas.
- **Resq - Cash Forecasting & Decision Support Tool:** Fintech prototype to generate deterministic 13-week cash forecasts and detect financial breakpoints. Implemented risk-driver analysis and AI-assisted action recommendations while keeping forecast math and cash logic fully deterministic.
- **Certifications:** Introduction to Version Control: Git and GitHub commands, Generative AI Intermediate.
- Professional **State level cricket KSCA** (Karnataka state cricket academy) U-14 and U-16
